

Abrasion Resistant Lining

Chemshun abrasion resistant lining for pipe is of wear resistance , impact resisting, easy operation, etc.

Product Details:

- > Chemshun abrasion resistant lining for pipe is of wear resistance , impact resisting, easy operation, etc., is ideal surface abrasion resistant material of bulk material transfer equipment in iron & steel works, thermal & power plants, port and terminals , cement.
- > Alumina Ceramic curved plate and trapezoidal taper tile fabricated as pipe linings for its radian and angle specially designed , best choice of cyclone , bend pipe, orifice , transition , inner cone ect equipment.
- > Chemshun can offer engineering ceramics and pre-fabricated ceramics lined equipment for customer's abrasion resistant project drawings

Difference of abrasion resistant lining & taper tile:

- 1: Width size difference :taper tile also named trapezoidal tile liner,the up-width and bottom-width is in different size;and standard tile liner is samle width
- 2: Shape difference compsoed: Several taper tile liners composited form a circle with angle but standard ceramic tile compsoed form a straight line
- 3: Application difference : alumina taper pipe linings is specially used for pipe or cyclone,hopper equipment etc.alumina standard tile includeing weldable tile widely used in chute etc.
