

Alumina Cylinder

Alumina Cylinders is one of best ideal material as lining for wear solution in mining industry, power plant, steel plant, cement plant

Product Features:

Alumina Ceramic Cylinder is made by high pure Alpha alumina oxide. It is one of best ideal material as wear resistant lining for abrasion solution in mining industry, power plant, steel plant, cement plant, etc. also best material embedded in high quality rubber to anti-impact and wear-resistant to extend the life time of industrial equipment effectively.

Alumina ceramic cylinder characters

- > High hardness
- > Superior abrasion resistance
- > Corrosion and chemical resistance
- > Light weight
- > Can be vulcanized in all kinds of rubber panel or conveyor
